

Complement; - مکمل، منقہ

→ * Universal Set (U)

$$\rightarrow P = \{2, 3, 5, 7, \dots\}$$

(N)

$$4 \notin P$$

$$8, 9, 10$$

these were not given as examples
beez these are not relevant
Trump $\notin P$

⇒ so, unspoken, yet N is the most common setting when speaking about P .

⇒ N is the universal set or universe for P .

Comp.

for set A ,

$$\bar{A} = U - A$$

complement of A

$$P = \{2, 3, 5, 7, 11, \dots\}$$

$$\bar{P} = N - P = \{1, 4, 6, 8, \dots\}$$
