

Logic:

→ systematic way of thinking

→ parse meanings $\Rightarrow$ deduce new information.

ex: ① $\rightarrow$ Area of a circle $= \pi r^2$ where r is the radius.

② $\rightarrow$ Circle P has radius of 3 units.

142 $\Rightarrow$ circle P has an area of 9π units²

$\rightarrow$ we use already proven information.

$$\rightarrow a^2 + b^2 = c^2$$

$$\rightarrow e = 2.71 \dots \quad \pi = 3.14 \dots$$

$\rightarrow$ 2 points can produce only 1 line. $\leftarrow$

$\rightarrow$ natural ordering: $6 < 7$

$\rightarrow$ well-ordering principle
